

Policy

There already exist media for news items of agronomic aspects of Lotus studies (Forage Notes, Research Branch, Canada Department of Agriculture, Ottawa; Clovers and Special Purpose Legumes Research, Forage and Range Research Branch, Crops Research Division, U.S. Department of Agriculture, Beltsville, Maryland; Northeastern Regional Plant Introduction Station Reports, N.Y. State Agricultural Experiment Station, Geneva, New York; Northcentral Regional Plant Introduction Station Reports, Ames, Iowa, etc.). Therefore, it is hoped to stress in future issues of this Newsletter genetics aspects, including biosystematics, chemotaxonomy, and other areas mentioned in the opening paragraph.

The Lotus Newsletter will be issued annually. It is anticipated to carry research notes in future issues and to provide other information such as availability of seed, requests for exchange of seed, recent published papers, news items and changes in the mailing list.

The Newsletter consists of informal reports which are presented to further the exchange of ideas and information between research workers. These may be suggestions or opinions rather than established facts. Before quoting any statements, the author involved should be contacted.
