Loti as a Component of Deer Diet

We have completed a manuscript for publication on Loti as a component of deer diet and habitat. Publication details will be given when arranged. This is a follow up to the study which reports Lotus purshianus (L. americanus) as being present in deer rumen contents in oak woodland sites (Book, S.A., Connolly, G.E. and Longhurst, W.M. 1972). Fallout ^{137}Cs accumulation in two adjacent populations of northern California deer. Health Physics 22: 379-385.
