

REQUESTS FOR RESEARCH MATERIAL

Nagy LASZLO, Vetomag es irodalomkeres, Ontozesi Kutato Intezet,
Szabadsag u. 2, 5540 Szarvas, Hungary, requests seed of extremely
narrow leaf types of Lotus; also types of narrow leaf with
good winter hardiness and drought resistance.

Ing. Agr. Monica REBUFFO, Estacion Experimental La Estanzuela, IICA,
Treinta y Tres 1374, P. 5, Montevideo, Uruguay, is asking for
seed samples of varieties or ecotypes of L. corniculatus,
L. uliginosus and L. tenuis.

Research Cooperation Sought

Ing. Agr. Mariana Kade, Centro de Ecofisiologia Vegetal, Serrano
665, 1414 Capital Federal, Argentina, is studying Lotus tenuis which
occurs spontaneous in the grasslands in large areas of Buenos Aires
Province. The area, characterized by 920 mm rainfall is subjected
during winter to frequent flooding, however, vegetation also suffers
from severe summer droughts. The soils are halomorphic in general
(Solonetz). Dr. Kade is interested in corresponding with anyone
studying Lotus with similar interests.
