

AN EARLIER LOTUS NEWSLETTER

The Lotus Leaf

by

H. A. MACDONALD

Department of Agronomy, Cornell University, Ithaca, New York.

"Some ten years ago I started a Lotus Newsletter much as you have now initiated. It was issued under the title "The Lotus Leaf" and was devoted to news, notes, research progress, accession evaluation, regional commentary and abstracts. My graduate students at the time agreed to assume part of the responsibility for preparing and assembling the material. It seemed like a worthy venture but after two issues I was forced to stop for administrative reasons. I hope you will have much better success".

Editor's Note: The Editor was unaware of this earlier Lotus Newsletter and dedicates this issue of the Newsletter to Dr. MacDonald who has done so much for making Birdsfoot Trefoil an important forage crop in North America to-day.
