J. Przybylska and B. Chwalek: 1971. Free amino acids in different Lotus
species. Acta Soc. Bot. Polon. In Press.

Abstract: Studies on free amino acid pools in various organs of
different Lotus species showed mature seeds to be distinguished by a
high concentration of canavanine and by the presence of gamma-glutamyltyrosine
and gamma-glutamylphenylalanine. In seeds of Lotus helleri and L.
purshianus homoarginine has been found which is interesting as the
occurrence of this amino acid seemed to be restricted to the genus
Lathyrus.
