Birdsfoot Trefoil in central and western Canada

Prof. Clark reports that in central and western Canada an introduction of birdsfoot trefoil has been found of value. This is P.I. 285283 cultivar 'Dedinovskiu metsnyj' from the U.S.S.R. He states:- "P.I. 285283 has a number of characteristics that would be of considerable value to western regions, both in the United States and Canada and I suspect that other workers have recognized it as a potentially valuable birdsfoot trefoil."
