

The Lotus pedunculatus-uliginosus nomenclature problem, II.

M. Lainz, S.J.

Universidad Laboral, Jose Antonio Giron, Gijon, Spain

ADDENDUM - Lotus Newsletter 5: 6-7, 1974

Lainz's summary of his own opinions:

- 1) The paper of Chrtkeva-Zertova in question (1966) is not convincing. Please, read what I said in CANDOLLEA just before the quotation in LOTUS NEWSLETTER, 5: 6-7.
- 2) There is no doubt that an accurate morphological and cytological work could yield positive results.
- 3) It would be very useful not to multiply the binomials.
- 4) It would be also useful to read the historical sketch I published in BULL. JARD. BOT. BRUXELLES 30: 35-36 (1960).
