

Seed Request

W. Foulds, Claremont Teachers College, Goldsworthy Road, Claremont, West Australia 6010, writes that he is in the process of testing wild populations of Lotus corniculatus and Trifolium repens in moist and dry environments for the frequency of cyanogenic phenotypes. Should any of the readers of the Lotus Newsletter live in areas where such habitats exist which are not subjected to winter frosting (i.e. the Temperature does fall below 0°C) I would be most obliged if samples of seed could be sent along with monthly annual rainfall data.
